Skunk Reported to Have Rabies

Watertown, NY – The New York State Department of Health Wadsworth laboratory has reported to the Jefferson County Public Health Service (JCPHS) that a skunk has tested positive for rabies. The skunk was located in the Village of Clayton and was submitted by the United States Department of Agriculture (USDA) for testing. There are no known human or pet exposures.

This is the tenth animal to test positive for rabies in Jefferson County so far in 2024. Two cats, five raccoons, one skunk and one bat have also tested positive for rabies this year.

Rabies is a fatal disease that attacks the brain and spinal cord. It can take several weeks to several months for rabies symptoms to appear. Early treatment after an exposure can prevent rabies in humans and in pets who are up to date on vaccination. Any mammal can get rabies, but it is most often seen in bats, raccoons, skunks, and foxes. Animals do not have to be aggressive or behave erratically to have rabies. Changes in any animal's normal behavior can be early signs of rabies.

Rabies cases have been identified across Jefferson County. Therefore, any unknown animal could have rabies. Avoid contact with unknown animals, including possible stray pets, as they may not have been vaccinated against rabies.

Please take these steps to help prevent the spread of rabies:

1. Teach children to stay away from unfamiliar animals, either wild or domestic, even if they appear friendly. Remind them to tell you if they have any unusual contact with an animal.
2. Do not leave pet food outside as it attracts wildlife to your home.
3. Wash any wound from an animal encounter thoroughly with soap and water and seek medical attention immediately.
4. Be a responsible pet owner by keeping your pet's vaccinations current – even strictly indoor pets. Getting your pet vaccinated by your vet or at a clinic (Petco, Tractor Supply and Pet Supplies Plus offer rabies vaccination clinics) can help stop the spread of rabies from wild animals to humans. JCPHS is hosting a series of rabies vaccination clinics throughout the month of August. The next clinic is on **Tuesday, August 20 6:00 – 8:00pm at the Clayton Town Barn**. Visit www.jcphs.org for additional clinic dates and locations.
5. Monitor your pet when they are outside. If your pet is involved in an altercation with a wild animal, do not get in between them. Do not touch your pet without gloves as rabies is spread through saliva. Cover your pet with a towel and contact your vet as your pet may need a booster shot.
